(a) Without the head
Storage provider
holds every version:
1 (old) and 2 (the latest)
serves version 1
old, but genuine
Client
keeps nothing
between commands
unlock only
Key server
login token,
locked master key
the seal verifies, and the client
has nothing to compare with:
accepts version 1
(b) With the head at the key server
Storage provider
holds every version:
1 (old) and 2 (the latest)
serves version 1
old, but genuine
Client
keeps nothing
between commands
the head
Key server
login token, locked master key,
the head: version 2
and its fingerprint
version 1 is not the version
the head names:
refuses, writes nothing
