unlock (E2SE's Take): salts from storage, login to the key server, master key opened
1. what is the latest version?
the head (n, h)
2. seal the vault as version $n+1$; h' = fingerprint of the sealed vault
3. move the head from n to $n+1$, with h'
accepted
or refused, if another device
moved the head first:
the client stops, nothing is uploaded
the head moves
before the upload
4. upload the sealed vault
